ENGINE IGNITION ANALYZER

SparkCheck'r™ allows you to check for

- Proper spark
- Shorted or fouled plugs
- Open or broken spark plug wires

FAST, SIMPLE, SAFE AND ACCURATE

Simply clip SparkCheck'r™ to the plug wire of a non-running engine and firmly pull recoil starter or energize electric start long enough to turn the engine over several times.

WORKS FOR MOST GAS ENGINES

SparkCheck'r™ will work on most two-stroke and four-stroke engines, with or without CDI electronic ignitions.

AUTO-ON & OFF DESIGN

The clip-on design allows for single person operation without removing plugs or plug wires. The auto-off feature avoids draining the battery when SparkCheck'r™ is removed from the plug wire.

DETAILED DIAGNOSTIC CHART & TAG

LED's on the SparkCheck'r™ light to accurately record the spark condition. Use the included Diagnostic Chart & Tag to find possible causes of the ignition problem.
